

# Interim Assessments

## Measure students' readiness and growth

With a legacy of impact in continuous improvement, accreditation, and assessment, Cognia™ offers members of the Cognia Global Network comprehensive solutions to grow leaders, teachers, and learners.

To make sound decisions about instructional practice and programs, you need reliable measures of student achievement. Cognia Interim Assessments give you actionable data about students' readiness for their new grade, and their progress toward grade-level expectations.

### Monitor progress all year

Cognia Interim Assessments offer three tests per year. With administrations near the beginning, middle, and end of the school year, you can see where your students stand in the fall and how they're progressing as the year continues.

### Efficiency and economy

Your subscription to Cognia Assessments combines up to three interim assessment administrations per year with **unlimited access to Cognia Formative Assessments** on the same platform, at one low cost. Plus, U.S. members may have access to federal ESSER funds to support implementation.

- Schools testing more than 200 students: \$2,400 per year—no more per-student costs
- Schools testing up to 200 students: only \$12 per student, per year

### Cognia Interim Assessments at a glance

- Aligned to widely used college and career readiness standards (such as Common Core State Standards) for direct relation to your instruction
- Three tests per year available in reading, language usage, and mathematics for grades 3–8
- Two sections in each test; flexible administration in one or two sittings
- Online delivery system with outstanding dependability and technical support, easy to use for both teachers and students
- Immediate reporting for instructional impact, with an overall scale score on the growth scale and an overall achievement level, demonstrating students' progress
- Subscore achievement levels indicate students' particular strengths and areas for improvement in each subject area
- Global perspective through content review by both U.S. and international educators
