A Clearer View of the Learner Experience

Learning has evolved and so have we. Introducing the redesigned Effective Learning Environments Observation Tool® (eleot®) that builds on the trusted foundation of eleot 2.0. Grounded in research on learner-centered instruction, our enhanced eleot reflects today's classroom with more useful ways to observe the conditions that help learners thrive—delivering more insightful reporting while ensuring its validity and reliability.

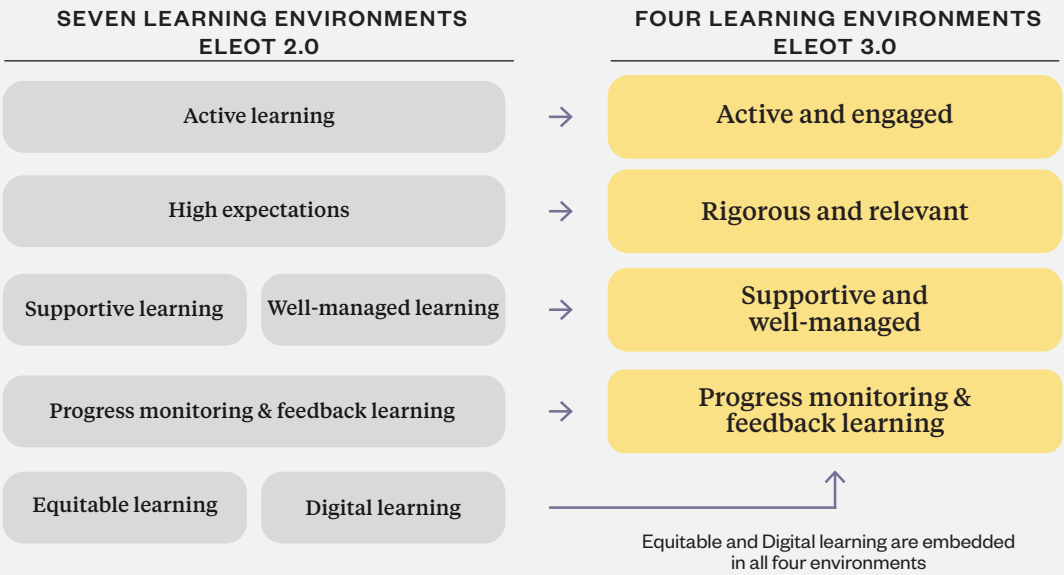

Use eleot to understand the daily experiences that empower students to:

- set goals, make choices, monitor progress, reflect, and take ownership of learning
- engage in productive struggle, higher-order thinking, real-world connections, and meaningful application
- feel respected, supported, and safe to take academic risks
- use digital tools to create, collaborate, explore, and solve problems

The new N/A option helps observers distinguish between "not evident" and "not applicable"

Gain clarity with four interconnected learning environments

The new eleot consolidates seven learning environments to four—reducing overlap, sharpening item language, and organizing evidence efficiently.
